IDII

MICHAEL O'LEARY
Grimes Companies

PETE RECTOR
Genco

MARK ROWE
Mitco

MIKE SANDES
Ackerman Security

TOM SINGLE
Saddle Creek Corporation

Technology plays a vital role in the distribution process, enabling companies to confront risks and opportunities and transform business performance through operational insight. More specialization, more efficiencies and more choices make selecting the right solutions a risk in itself. Today, it is imperative that operations, information technology, and distribution professionals execute due diligence in order to select the technology that will optimize performance in their facilities.

Attendees will be immersed in new and emerging technologies for the warehousing environment, in a comprehensive new program that integrates an array of learning opportunities and provides an open forum for peer-to-peer discussion. Industry experts will focus on evaluating, selecting, and implementing the latest technology solutions for warehousing and operations management. They'll share "war stories" and discuss how to apply technology strategies to real-world situations for 3PLs with IT groups ranging from the very small to the very large.

What You'll Learn

- To identify key opportunities to win and keep customers and to boost profits and productivity through technology solutions.
- To understand the ROI of the technologies presented.
- To assess the competitive advantages available to your company through technology.
- To identify how voice-picking, automation equipment, logistics software, EDI, your website, wireless transportation data collection (and more) can improve customer response, warehouse productivity and provide tangible payback.
- To pinpoint the key benefits and requirements for technology-based green workflow, MHE, and physical security in your warehouse.
- To increase your peer network, exchange ideas, discuss industry issues and learn how new information technology developments affect your company.
